Introduction & Platform Access

The **Ziproh Compliance Platform** is a cloud-based SaaS application purpose-built for UK health and social care providers. It delivers an integrated suite of compliance tools — policy libraries, audit management, staff reading lists, learning modules, and an AI-powered compliance assistant — all accessible from a single, secure web application.

This guide is written exclusively for **platform administrators**. It covers every section of the platform, all administrative functions, and the technical steps required to manage users, content and billing.

Platform Access Details

Item	Detail
Platform URL	https://app.ziprohtraining.co.uk
Admin Panel	https://app.ziprohtraining.co.uk/admin
Main Website	https://ziprohtraining.co.uk
Support Email	hello@ziprohtraining.co.uk
Hosting	Vercel (EU region — always-on, auto-scaling)
Database	Supabase (PostgreSQL with row-level security)
Billing	Stripe (subscription & payment management)
AI Engine	Anthropic Claude (claude-haiku-4-5)

Admin Credentials

Name	Email	Access Level
Washington (Owner)	waskap@icloud.com	Super Admin
Melary Kapapiro	melary@ziproh.com	Admin

■ Important

Admin accounts have full access to all user data, billing records, and platform content. Never share your password. Always use a secure channel to communicate credentials to new admins.

2

What's New in Version 2.0

NEW

Version 2.0 (June 2026) introduces organisation branding, hardened PDF generation, formal policy adoption with bulk export, in-platform knowledge checks, and QR-verified CPD certificates.

Feature	Summary	Where
Organisation logo upload	Upload a PNG/JPEG/WebP/SVG logo (max 2 MB). Shown beside the company name in the sidebar and on every policy PDF cover in a white branded card.	Account Settings
Encrypted policy PDFs	Policy downloads are generated server-side, branded with the organisation name and logo, and encrypted — printing allowed, copy/edit/annotate locked.	Policy Library / My Policies
Trial watermarking	Trial accounts receive truncated previews with a diagonal red "TRIAL PREVIEW — NOT FOR DISTRIBUTION" watermark and an upgrade notice. Subscribed accounts receive the full clean document.	All PDF downloads
Policy adoption	Organisations formally adopt each policy (reviewer name, role, date). Adoption details are printed in a green panel on the PDF cover.	My Policies
Bulk portfolio export	One click downloads every adopted policy as branded PDFs in a single ZIP with a manifest — built for inspection day.	My Policies
Knowledge checks	Five-question quizzes per training module. Pass at 80% to record the completion automatically in the CPD log.	Learning Centre
Redesigned certificates	CPD certificates now carry the Ziproh wordmark, icon verification seal, a scannable QR code, and a 12-month expiry date (training renewed annually).	Learning Centre
Certificate registry	Public verification page at /verify/[reference]. Anyone scanning a certificate QR code sees instant confirmation that it is genuine.	app.ziprohtraining.co.uk/verify
Trial countdown	Days-remaining counter on the Dashboard linking to the upgrade page; turns red in the final 3 days.	Dashboard
Stripe activation fix	Completing checkout now activates the subscription correctly (previously accounts could remain flagged as trialing after payment).	Billing (automatic)

3

Platform Overview & Navigation

The platform is built with **Next.js 16** (App Router, TypeScript), **Supabase** for authentication and database, **Stripe** for payments, and **Anthropic Claude** for the AI assistant. The architecture is fully serverless — there is no backend server to manage.

3.1

Sidebar Navigation

The sidebar shows the organisation name — with the uploaded logo beside it — and groups pages into Compliance, Inspection Readiness, Team, and Tools.

Group	Page	Purpose
—	Dashboard	Compliance score, KPIs, trial countdown, team compliance
Compliance	Policy Library	60+ policy documents by CQC Key Question
	My Policies	Adopted policy portfolio, re-review flags, bulk ZIP export
	My Record	Personal reading and acknowledgement record
Inspection Readiness	Inspection Prep	Per-Key-Question readiness checklists
	Policy Reviews	Annual policy sign-off schedule
	Evidence Report	Compliance evidence report generator
	Audit Centre	Run CQC-style self-assessments
Team	My Staff	Invite staff, manage roles, track reading
	Reading Lists	Assign policies to staff with due dates
	Learning Centre	CPD modules, knowledge checks, certificates
Tools	Ziproh AI	AI compliance assistant (Claude)
	Feedback Surveys	Collect platform satisfaction data

3.2

Notification Bell

The bell icon in the top-right corner shows live notifications: updated policies awaiting acknowledgement, overdue audits, pending staff invitations, and low compliance score warnings. The red badge reflects the unread count.

4 Admin Panel

The Admin Panel is accessible at `/admin` and is restricted to accounts with `is_admin = true` in the Supabase profiles table. Non-admin users are automatically redirected to `/dashboard`.

SQL — Grant Admin Access

```
UPDATE public.profiles SET is_admin = TRUE WHERE email = 'user@example.com';
```

4.1 Analytics Tab

Metric	Description
Total Users	Count of all registered accounts
Active Organisations	Organisations with <code>subscription_status = 'active'</code>
Trialing Organisations	Accounts in their 14-day free trial
Monthly Recurring Revenue	Sum of active subscription prices (Starter £49, Pro £99, Enterprise £199)
Plan Distribution	Bar chart — count of users per plan
Top Read Policies	10 most-viewed documents across all users
Recent Signups	20 most recently registered accounts

4.2 Users Tab

Lists all registered accounts with live search and filtering. Click **Edit** on any row to change plan, subscription status, or admin access. All changes are recorded in the `admin_audit_log` table.

4.3 Organisations Tab

Click any organisation row to open a detail drawer showing: organisation name, service type, regulator, staff member list, recent audits, policy read records, and active reading lists.

4.4 Content Management Tab

Manages `policy_overrides` — custom content for specific policy documents. An override immediately replaces built-in content for all users viewing that document. Deleting an override instantly restores the built-in version.

4.5 PDF Unlock Passwords

Policy PDFs are encrypted with an owner password that locks editing and copying. The platform default applies to every organisation; a per-organisation override can be set from the Admin Panel (stored in `profiles.pdf_unlock_password`). Share an unlock password only when an organisation has a legitimate need to edit its own documents.

5

Compliance Centre (Policy Library)

UPDATED

The Policy Library (</compliance>) contains 60+ policy documents organised into the CQC 5 Key Questions. Policies are ready to use, can be customised via Content Management, and every download is personalised to the organisation.

Policy Categories (CQC 5 Key Questions)

Prefix	CQC Key Question
saf-	Safe
eff-	Effective
car-	Caring
res-	Responsive
wl- / wel-	Well-led

PDF Export Flow (v2.0)

- 1
- User clicks **Download PDF** on a policy page or My Policies card
- 2
- Browser calls [/api/policy-pdf/\[doc-id\]](/api/policy-pdf/[doc-id]) — authentication required
- 3
- Server builds the branded A4 PDF: organisation name substituted throughout, logo on the cover card, adoption panel if the policy is adopted
- 4
- Trial accounts: content truncated to 2 sections + diagonal red watermark on every page
- 5
- PDF encrypted — printing allowed; copy, edit, and annotation locked
- 6
- File downloads directly — no print dialog needed

✓ Tip

Trial downloads are intentionally watermarked and truncated — this is the upgrade incentive. Subscribed organisations receive complete, clean, adoption-stamped documents.

6

My Policies & Policy Adoption

NEW

My Policies (</my-policies>) is the organisation's formal policy portfolio. Adopting a policy records who reviewed it, their role, and the adoption date — and stamps those details on the PDF cover in a green "Formally Adopted" panel.

Adopting a Policy

- 1

Open the policy and click **Adopt this Policy**
- 2

Enter the reviewer's name and role (e.g. Registered Manager)
- 3

Confirm — the adoption is recorded with today's date
- 4

When Ziproh updates a policy, it moves to **Needs Re-Review** until re-adopted

Bulk Portfolio Export (ZIP)

The **Download All (ZIP)** button generates every adopted policy as a branded, encrypted PDF and packages them in a single ZIP with a manifest listing the contents and generation date. Built for handing to an inspector on arrival.

Detail	Behaviour
Scope	Adopted policies only (the formal portfolio)
Trial accounts	Files are watermarked previews, prefixed TRIAL-PREVIEW-
Manifest	MANIFEST.txt lists organisation, date, and included documents
Endpoint	/api/policies/export-zip

7

Organisation Logo & Branding

NEW

Organisations can upload their own logo, which appears beside the company name in the sidebar and on the cover of every downloaded policy PDF, presented in a white rounded card so dark, light, and transparent logos all sit cleanly.

Uploading a Logo

- 1 Go to **Account Settings** → **Organisation Logo**
- 2 Click **Upload Logo** and choose a PNG, JPEG, WebP, GIF or SVG (max 2 MB)
- 3 The preview updates immediately; the sidebar shows the logo on next refresh
- 4 Every subsequent PDF download carries the logo on its cover

Detail	Notes
Storage	Supabase Storage — public org-logos bucket, one file per organisation
Accepted formats	PNG, JPEG, WebP, GIF, SVG
Size limit	2 MB
Replace / remove	Re-upload to replace; Remove logo deletes it (PDFs revert to name-only covers)

■ Important

The [org-logos](#) storage bucket and its access policies must exist in Supabase. They are created by the storage section of [supabase-schema.sql](#) — if logo uploads fail with a bucket error, run that section in the Supabase SQL Editor.

8 Audit Centre

The Audit Centre (</audit>) allows organisations to run self-assessments against the CQC 5 Key Questions. Each completed audit produces a compliance score and flags areas requiring attention.

Running an Audit

- 1 Go to Audit Centre → click **New Audit**
- 2 Select type: CQC Self-Assessment / Internal / External
- 3 Answer questions for each of the 5 Key Questions
- 4 Platform calculates compliance score in real time
- 5 Submit — record saved to the audits table in Supabase

Compliance Score Key

Score Range	CQC Rating	Indicator
80% and above	Good / Outstanding	Green
60% – 79%	Requires Improvement	Amber
Below 60%	Inadequate	Red

9

Reading Lists

Reading Lists (</reading-lists>) allow administrators to assign specific policy documents to staff members with a due date and track their completion status.

- 1 Click **Create Reading List** and give it a name and description
- 2 Select policies to include from the document library
- 3 Set a due date for completion
- 4 Assign to one or more staff members — they receive a notification
- 5 Track completion from the reading list detail page (green tick = read)
- 6 Overdue lists are highlighted in amber; you are notified on full completion

10

Ziproh AI Assistant

Ziproh AI ([/ai-assistant](#)) is powered by Anthropic Claude. It provides compliance guidance based on UK health and social care legislation, CQC standards, and regulatory guidance. Available 24/7.

Example Questions

- What does CQC look for under the 'Safe' Key Question?
- How do I evidence person-centred care for a CQC inspection?
- What are my legal responsibilities for medication management?
- What should be included in a robust safeguarding policy?
- How do I demonstrate the 'Well-led' Key Question?

■ Important

Ziproh AI provides general compliance guidance and should not replace professional legal, clinical, or regulatory advice. All AI responses should be reviewed by a qualified professional before being relied upon for CQC inspections or legal matters.

11 Staff Management

The My Staff section (</staff>) allows administrators to invite team members, assign roles, and track their activity on the platform. The Staff Matrix gives a team-wide view of reading compliance.

Staff Roles

Staff	Manager	Admin
Read policies, complete reading lists and assigned audits	All Staff permissions + invite staff, create reading lists	Full platform access including admin panel and billing management

Action	How To
Invite staff	Click Invite Staff Member → enter name & email → select role → Send Invitation
Change role	Click Edit on the staff row → change role → Save
Remove staff	Click Remove — login disabled but records preserved for compliance reporting
View activity	Click a staff name to see their policy reads, reading list completion, and audit history

12

Learning Centre & Knowledge Checks

UPDATED

The Learning Centre (</learning>) provides structured CPD training modules organised into topic categories. Version 2.0 adds in-platform **knowledge checks** — five-question quizzes that record completions automatically and unlock CPD certificates.

Taking a Knowledge Check

- 1 Open a module and study the material (or complete the course on the training site)
- 2 Click **Take Knowledge Check** — five multiple-choice questions
- 3 Score **80% or higher** (4/5) to pass; failed attempts can be retaken immediately
- 4 Passing records the completion in the CPD log with an auto-generated certificate reference
- 5 Click **↓ Download Certificate** for the personalised CPD certificate

Modules with Knowledge Checks

Module	Title	Level
Irn-001	Safeguarding Adults — Foundation	Foundation
Irn-002	Medication Administration	Foundation
Irn-003	Infection Prevention & Control	Foundation
Irn-005	Mental Capacity Act & DoLS	Intermediate
Irn-006	Moving & Handling	Foundation
Irn-007	Dementia Care Excellence	Advanced
Irn-008	End of Life Care	Advanced
Irn-009	Leadership in Care	Advanced

External training can still be logged manually with ✓ **Log as Completed**, including provider, date, and certificate reference.

13

CPD Certificates & QR Verification

NEW

CPD certificates are generated as A4 landscape PDFs carrying the Ziproh wordmark, the learner and organisation names, course details, CPD hours, the Ziproh icon verification seal, and a scannable QR code.

Certificate Anatomy

Element	Detail
Ziproh wordmark	Centred at the top of the certificate
Learner & organisation	Pulled from the user's profile at generation time
Detail pills	Date completed, duration, CPD hours, and valid-until date (red accent)
12-month expiry	Certificates expire 12 months after completion — training must be renewed annually. The expiry date is printed on the certificate and checked by the verification registry.
Verification seal	Ziproh icon in a double gold ring, labelled VERIFIED
QR code	Links to the public verification registry for that certificate reference
Certificate ID	Unique reference, e.g. ZT-2026-48217

Public Verification Registry

Scanning the QR code (or visiting [app.ziprohtraining.co.uk/verify/\[reference\]](https://app.ziprohtraining.co.uk/verify/[reference])) opens a public page — no login required — that confirms whether the certificate is genuine. Valid, current certificates show a green "verified" panel with the learner, organisation, training, completion date, expiry date, and issuer. Genuine certificates older than 12 months show an amber "training expired — renewal due" warning instead. Unknown references show a clear red "not found" warning with a contact route.

SQL — Registry Migration

```
-- The registry is backed by the certificate_registry view.
-- Created by the latest section of supabase-schema.sql:
CREATE OR REPLACE VIEW public.certificate_registry AS
SELECT tc.certificate_ref, tc.training_name, tc.module_id, tc.provider,
       tc.completed_at, (p.first_name || ' ' || p.last_name) AS learner_name, p.org_name
FROM public.training_completions tc
JOIN public.profiles p ON p.id = tc.user_id
WHERE tc.certificate_ref IS NOT NULL;
GRANT SELECT ON public.certificate_registry TO anon;
```

14

Account & Billing

Subscription Plans

Starter £49/mo • Up to 3 staff • All policies • Ziproh AI • Audit Centre	Professional £99/mo • Up to 15 staff • Reading Lists • Learning Centre • Priority support	Enterprise £199/mo • Unlimited staff • Custom onboarding • Dedicated support • SLA guarantee
---	--	---

Account Settings Tabs

Tab	What You Can Do
Overview	View current plan, subscription status, account details; upgrade plan
Billing	Open Stripe Customer Portal — update payment method, download invoices, cancel subscription
Profile	Update names, organisation details; upload the organisation logo; change password

✓ Tip

The Stripe Customer Portal must be activated before use: Stripe Dashboard → Settings → Billing → Customer Portal → Activate. As of v2.0, completing checkout correctly activates the subscription — trial watermarks disappear from the next PDF download.

15 Organisation Profile

Organisation details are managed from Account Settings and appear throughout the platform and on every exported document.

Field	Options / Notes
Organisation Name	Appears on all PDF exports, the sidebar, and certificates
Service Type	Domiciliary Care, Residential Care Home, Supported Living, Day Service, etc.
Regulatory Body	CQC (England), CIW (Wales), Care Inspectorate (Scotland), RQIA (N. Ireland)
Organisation Logo	Shown in the sidebar and on PDF covers — see Section 7

16 Platform-Wide Search

Search queries four data sources simultaneously. Matching keywords are highlighted in blue. Results can be filtered by type using the category tabs.

Source	What It Searches	Scope
Policies (documents)	Title, category, description	All users
Audits	Audit title and type	Your account only
Staff	Name and email address	Your organisation only
Reading Lists	Name and description	Your organisation only

17 Help & Support / Feedback

17.1 Help Page (/help)

Contains an FAQ accordion covering common user questions about policies, billing, audits, AI, and passwords. A contact form opens the user’s email client pre-populated with hello@ziprohtraining.co.uk.

17.2 Feedback Surveys (/feedback)

Field	Type	Detail
Overall Rating	1–5 stars	Overall platform satisfaction
Policies Rating	1–5 stars	Quality of policy documents
Audit Centre Rating	1–5 stars	Audit tool experience
AI Assistant Rating	1–5 stars	Ziproh AI quality
Value for Money	1–5 stars	Pricing satisfaction
NPS Score	0–10 slider	Likelihood to recommend
Best Feature	Open text	What users like most
Improvement	Open text	Suggestions for improvement

■ Note

All feedback responses are saved to the `feedback_responses` table in Supabase and can be viewed from Admin Panel → Analytics.

18 User Onboarding Flow

New users see a Getting Started checklist on the Dashboard until dismissed. It tracks profile completion, first policy acknowledgement, first audit, staff invitations, and reading list creation.

Step	Title	Content
1	Complete your profile	Organisation name, service type, and regulator
2	Policy Library	Browse policies and acknowledge a document
3	Run your first audit	Use an audit template to check compliance
4	Invite your team	Add staff so they can read policies and track compliance
5	Assign reading	Create a reading list and assign priority policies

19 Technical Administration

UPDATED

19.1 Key Database Tables & Views

Table / View	Purpose
profiles	User account data — org info, plan, is_admin, logo_url, pdf_unlock_password
policy_adoptions	Formal adoption records (reviewer, role, date) per policy
read_records	Policy reading / acknowledgement records
audits	Audit records and responses
reading_lists	Reading list definitions and assignments
staff_members	Invited staff and their status
training_completions	CPD training log incl. certificate references
certificate_registry (view)	Public certificate verification — backs /verify/[ref] and QR codes
feedback_responses	Feedback survey submissions
policy_overrides	Admin-set custom policy content
admin_audit_log	Log of all admin panel actions
storage: org-logos	Public bucket holding organisation logos

19.2 Environment Variables (Vercel)

Variable	Purpose
NEXT_PUBLIC_SUPABASE_URL	Supabase project URL (public)
NEXT_PUBLIC_SUPABASE_ANON_KEY	Supabase anon key (public)
SUPABASE_SERVICE_ROLE_KEY	Supabase service role key (server only — never expose)
STRIPE_SECRET_KEY	Stripe secret key (server only)
NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY	Stripe publishable key (public)
STRIPE_WEBHOOK_SECRET	Stripe webhook signing secret
ANTHROPIC_API_KEY	Claude AI API key
NEXT_PUBLIC_SITE_URL	Base URL printed in certificate QR links (defaults to app.ziprohtraining.co.uk)

PDF_OWNER_PASSWORD	Platform-default PDF encryption owner password
--------------------	--

19.3 Deploying Updates

- 1 Make code changes in the project folder
- 2 Run `npm install` if package.json changed (v2.0 adds qrcode and jszip; removes @react-pdf/renderer)
- 3 Run: `git add -A` then `git commit -m 'description of changes'`
- 4 Run: `git push origin main`
- 5 Vercel auto-builds and deploys (approx. 60–90 seconds)

19.4 Running SQL Migrations

- Go to supabase.com and log in to the Ziproh project
- Navigate to SQL Editor in the left sidebar
- Paste the migration SQL and click Run
- Verify the output shows no errors before proceeding

■ v2.0 Migration Required

The certificate verification registry requires the certificate_registry view (end of supabase-schema.sql). Run that section once in the SQL Editor or QR verification pages will show "not found" for valid certificates.

20 Creating Admin Users

To create a new admin account with a mandatory first-login password change, run the `supabase-create-admin-[name].sql` file in the Supabase SQL Editor.

Force Password Change Flow

- 1 Run SQL — creates user with temp password + `force_password_change: true`
- 2 Admin receives temp password securely from you
- 3 Admin logs in with temp password
- 4 Platform detects `force_password_change` flag in user metadata
- 5 Password reset email sent automatically to admin's inbox
- 6 Admin clicks email link → sets their own secure password
- 7 `force_password_change` cleared — full platform access granted

■ Important

Temporary admin passwords must be changed on first login and shared only via a secure channel.

21

Troubleshooting

UPDATED

Issue	Resolution
White screen after login	Check Vercel build status. Clear browser cache. Verify Supabase is online.
'Not Found' on /admin	Ensure <code>is_admin = TRUE</code> in the profiles table for your account email.
PDF download fails	Fixed in v2.0 (page-overflow recursion in the generator). If it recurs, check the Vercel function logs for [policy-pdf] errors.
Logo upload does nothing	Fixed in v2.0 (double file-dialog trigger). If an error toast appears, ensure the org-logos bucket exists — run the storage section of supabase-schema.sql.
Logo missing from PDFs	Confirm the logo shows in Account Settings; the PDF fetches it at generation time (4-second timeout, then falls back to name-only cover).
Certificate QR shows "not found"	Run the <code>certificate_registry</code> view migration (Section 19.4).
Paid account still watermarked	Check <code>profiles.subscription_status = 'active'</code> . v2.0 webhook sets this automatically on checkout; for older accounts update it via the Admin Panel.
Stripe portal button errors	Activate the Stripe Customer Portal in Stripe Dashboard → Settings → Billing.
Build fails after pull	Run <code>npm install</code> — v2.0 adds <code>qrcode</code> and <code>jszip</code> dependencies.
Git push fails with <code>index.lock</code>	Run: <code>rm -f .git/index.lock</code> then retry the push.
Vercel builds old commit	Do not use Vercel 'Redeploy'. Push a new commit to trigger a fresh build.
CREATE POLICY IF NOT EXISTS error	Use <code>DROP POLICY IF EXISTS ...</code> then <code>CREATE POLICY ...</code> (without <code>IF NOT EXISTS</code>).

Key SQL Commands

SQL Quick Reference

```
-- Grant admin access
UPDATE public.profiles SET is_admin = TRUE WHERE email = 'user@example.com';
-- Revoke admin access
UPDATE public.profiles SET is_admin = FALSE WHERE email = 'user@example.com';
-- List all admin users
SELECT email, first_name, last_name FROM public.profiles WHERE is_admin = TRUE;
-- Verify a certificate manually
SELECT * FROM public.certificate_registry WHERE certificate_ref = 'ZT-2026-48217';
-- Check an organisation's subscription state
SELECT org_name, plan, subscription_status, trial_ends_at FROM public.profiles
WHERE email = 'user@example.com';
-- View recent admin audit log
SELECT * FROM public.admin_audit_log ORDER BY created_at DESC LIMIT 20;
```
